

# Friendly toxin brings Summer benefits

It might sound slightly scary, but the Botulinum Toxin Service offered by the Island's Orchard Cosmetic Skin Clinic is going from strength to strength.

The clinic's team of doctors offers Botulinum toxin to treat facial wrinkles and underarm sweating, but they are also developing the service to offer treatments for hand and feet sweating, as well as migraine.

Botulinum toxin (commonly known as Botox) is a natural protein produced by the Clostridium Botulinum bacterium. Tiny amounts are injected into wrinkle-causing muscles, temporarily blocking nerve impulses and allowing those

muscles to relax. This results in smoother, younger-looking skin.

When used for sweating it blocks the nerves which supply the sweat glands so they don't produce sweat.

Dr Hayley Elsmore says: "Now is a great time to consider Botulinum toxin treatment for underarm sweating. Hyperhidrosis is a significant problem for many people, and causes discomfort and embarrassment. Botulinum toxin can dramatically reduce, and in some cases completely stop, underarm sweating. The effect can last 6-9 months and relieves the need for changing your shirt several times a day!"

"That means it's possible to enjoy the summer with younger, fresher-looking skin, and discover long-lasting relief from sweating!"

Contact Orchard Cosmetic on 01983 719772 or find them at 13 Lugley St, Newport, PO30 5HD. Visit the website at [www.orchardcosmetic.co.uk](http://www.orchardcosmetic.co.uk).
